The genetic fingerprint is made up of a panel of 21 microsatellite markers and one gender marker. This panel is compliant with the ISAG 2006 international standard. Each marker has two alleles coded in the form of a letter and numbers. The possible presence of the symbol (-) indicates that this marker cannot be analyzed in this dog. The probability of obtaining different genetic fingerprints for individuals taken at random from the population is greater than 99.9%.

DOPLER

Aorta
Subcostal

V max 1,76 m/s

Signs of valve insufficiency NO

Flow laminar

Macroscopic changes in aortic valves NO

A.pulmonalis
